

Simplify

Your data processing
- The PRISMA API -

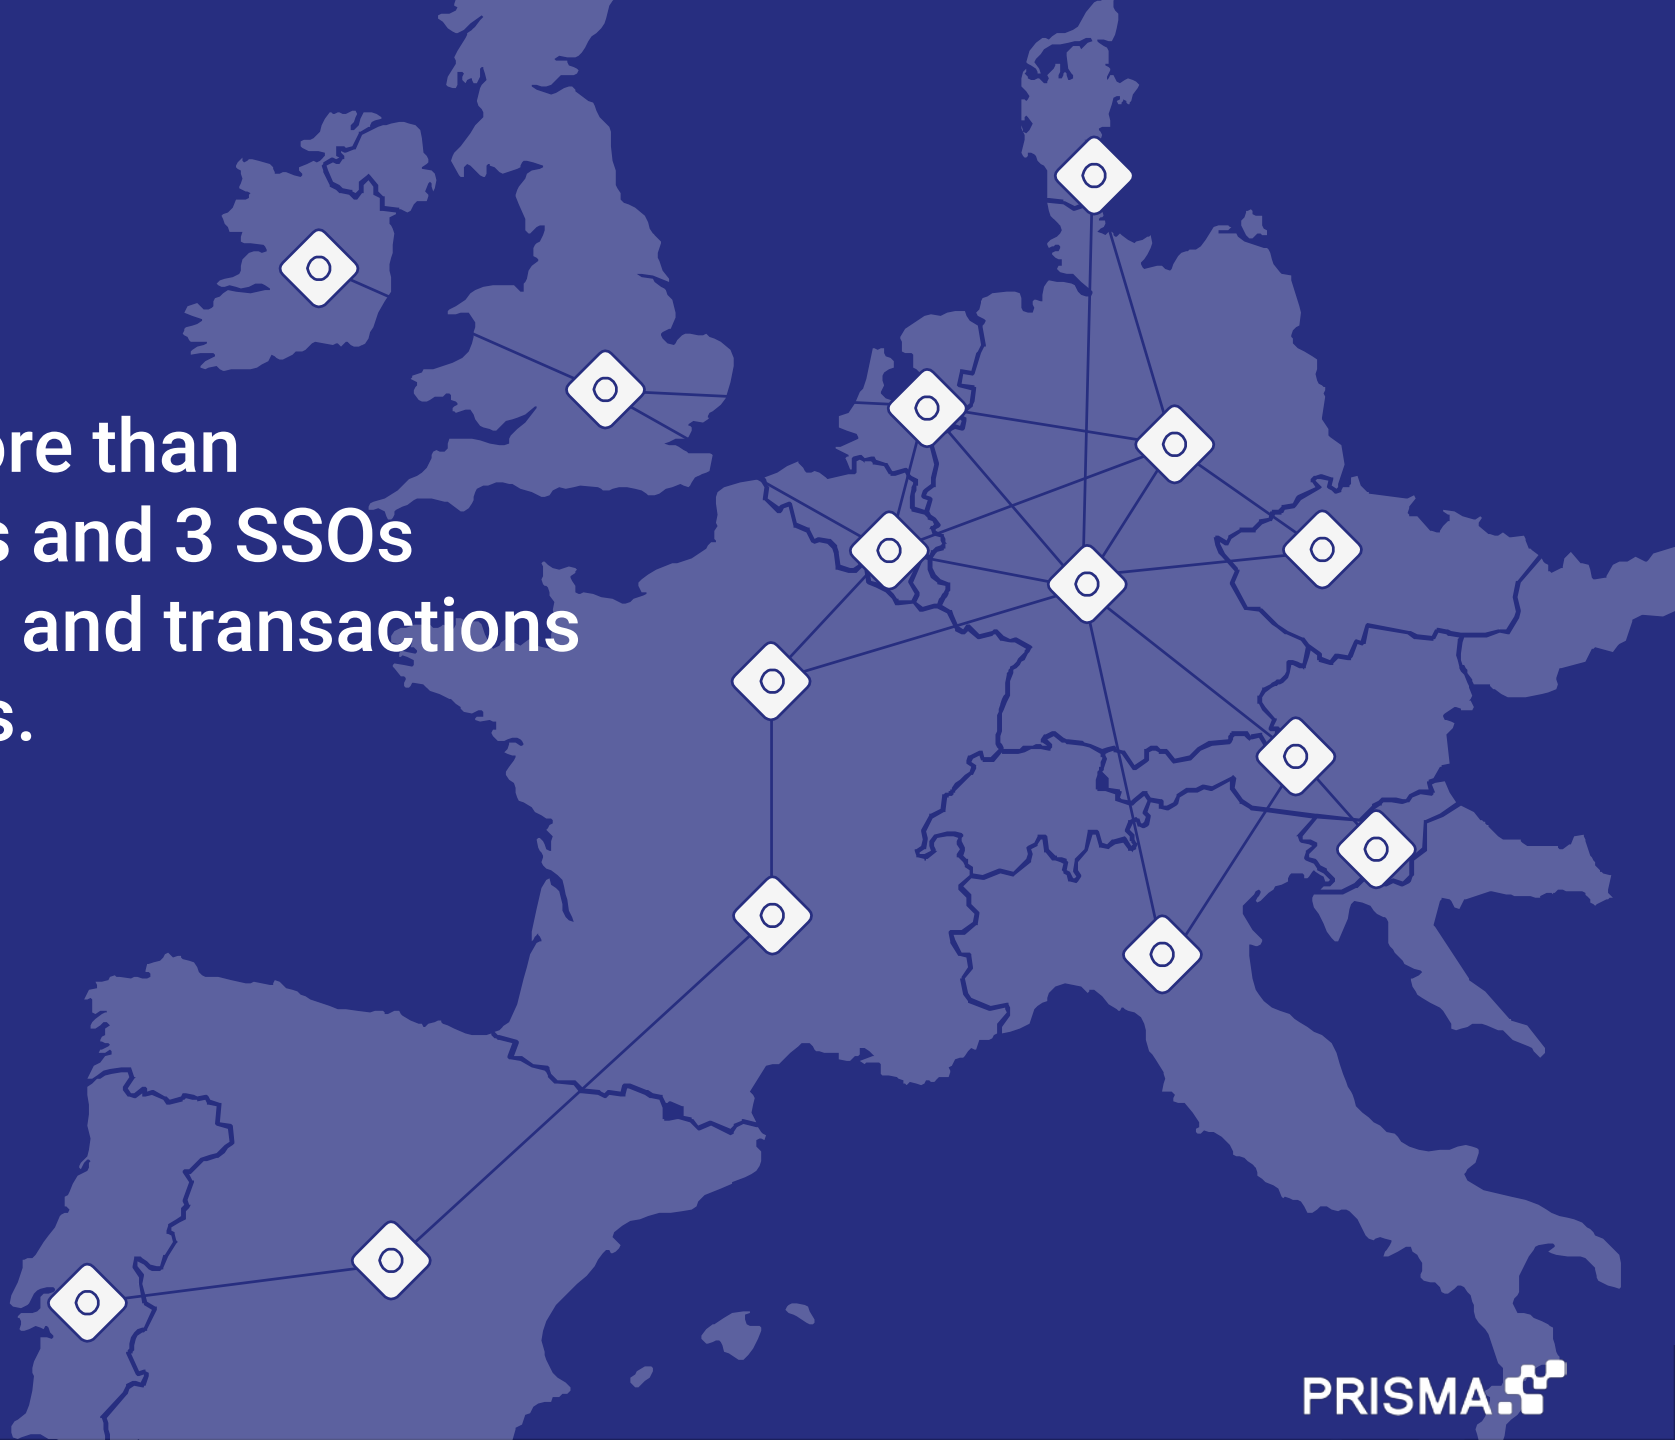

René Lindner

WHO WE ARE

We are a high-energy, international team, developing and operating the central platform to manage gas movement across Europe for the fast evolving needs of energy market operators.

Since 2011 we have developed and demonstrated expertise in designing, building and operating complex IT systems in a highly regulated environment.

We are connecting more than 600 shippers, 38 TSOs and 3 SSOs to foster collaboration and transactions across market borders.

What is the problem?

Volume and usage of short-term products continue to rise. Being fast and accurate at the same time is essential for a successful bidding process, especially when managing several market areas at once.

Talk Human to Me: What's an API?

- Application Program Interface
 - contract for data interaction
 - “Ask question, get answers”
- Transfer of raw data

Do you have an example for me?

Hey PRISMA, get me the contracts I have concluded since yesterday.

Here you go: the latest 31 items, with related data on the user, transaction type, and some other relevant stuff!

But how do I send my data?

Hey PRISMA, the user wants to post a new storage capacity offer. The message is "Storage location 01" and they also included a file "details.pdf".

Ok, got it.

Start-up unicorns and 'old industry' will benefit from connections via APIs

And what exactly does the PRISMA API do?

Deal data for:

- Auction data
- Secondary trades
- FCFS booking information

No more manual data entry for your deal capturing.

That's nice, but what is next?

Transaction overview:

- All (public) market transactions
- Short term auctions – live into your optimization model

Master Data:

- TSOs, network points, Storage operators, Shippers

Available later this year.

But wait, there's more.

Buy and sell capacity directly from your IT systems:

- Take part in short term auctions,
- Offer and buy capacity on the secondary market

Available during 2019

SOUNDS INTERESTING?

Reach out, we are happy to connect.
